

Margaree Salmon Association

Margaree Fishing Pools

A Canadian Heritage River

Did You Know?

The largest salmon caught in Nova Scotia by rod and reel was 52.5 pounds, taken from the Margaree River in 1927.

The Margaree Fish Hatchery is the second oldest hatchery in the Maritime provinces.

Many traditional salmon flies used today were developed in Margaree including those seen on this map. Special thanks to John Hart for his contribution of the flies used for the production of this map.

The Margaree Salmon Association is continually striving to conserve and enhance the Margaree River. Your support and contribution will help in our effort to sustain the Atlantic salmon. For further information, donations and memberships contact:
